

What To Expect on First Visit

The purpose of the initial examination is to answer:

- What sort of problem is present, if any?
- When is the proper time to begin treatment?
- What type of treatment is indicated?
- How long will treatment take?
- How much will the treatment cost?

What's Next?

If orthodontic treatment is indicated at this time, an appointment for additional Diagnostic Records is scheduled. If time allows, these diagnostic records can be taken at the initial visit.

What are Diagnostic Records?

- Impressions or molds of your teeth.
- Panoramic and cephalogram radiographs.
- Photographs of your teeth and face.
- The diagnostic records are analyzed and a subsequent appointment is setup where the doctor will consult with you regarding the best course of treatment.

What does my investment include?

Your investment includes:

- Orthodontic records, which consists of x-rays, study models and photographs to determine your treatment objectives.
- Active treatment fee for both early treatment options and complete comprehensive treatment with braces, Invisalign, or lingual braces includes all appliances, office visits, and procedures performed in our orthodontic practice by Dr. Wiltshire. Appliances are durable and should last through the entire treatment period if the patient follows instructions. If appliances require replacement due to loss, breakage, misuse or failure to eliminate foods that cause damage, there will be additional replacement fee.
- One set of final retainers is provided upon completion of treatment. There is a replacement fee for each additional retainer that is lost or broken.
